

Trajectories of Women Affected by Sexual Violence in Belo Horizonte's Health Services, Brazil

Design: descriptive study; deterministic linkage. **Population:** females, aged 10 to 49; **Time:** 2016 to 2020

Primary Health Care

295 cases with sexual violence diagnosis

56.6% with violence notification

Two women died

Reccomendations:

- Improve detection and reporting of sexual violence;
- Promote integrated and coordinated support throughout the health system;
- Promote adequate referral to the intersectoral network.
- Provide continuing professional training for health workers.
